

DISCRETE SEMICONDUCTOR
INDUSTRIES

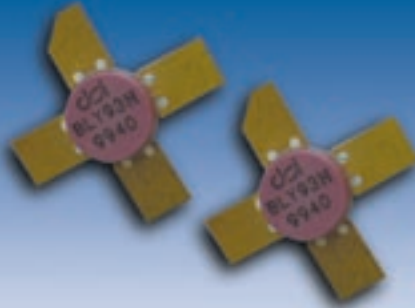

ESM 3004/DSI Highpowertransistor

Who is DSI?

The company DSI was founded 1985 in Florida. At the beginning HI-REL-Products were especially produced for the american and european Military-Market.

Two years later the range of components had been extended for the professional industries. This range covers Powerdiodes, Power-Transistor, Thyristors, as well as RF-Powertransistors, which all are strictly produced to the standard norm system Jedec and Pro-Elektron or to customer specification.

In 1992 the european establishment was founded in Geretsried and 1995 the factory in Florida was closed. DSI-Germany was made responsible for the quality-control of all components on the worldwide market.

DSI-Targets

The main target of DSI is the production of high quality components, which cover the customer requirements.

As the requirements of the industries change permanently, we are prepared to satisfy all customers needs and to fulfill all special wishes. Because we have many years of experience in Semiconductors we can guarantee prompt delivery with constant high quality.

Experience, quality, punctual delivery and competitive prices are the keys to our and to your success.

Let us proof to you what DSI can do for you. We can offer you quick and long term solutions for your production process and help you, in this way, to prevent expensive redesigns.

DSI-Certification

DSI is certified to DIN ISO 9002 and is registered as trademark since December 11th, 1996.

DSI is registered at the German Federal Armed Force as manufacturer under the number C6250.
